PROFESSIONAL SUMMARY

Project Manager with 4+ years running client engagements end to end for web, mobile, SaaS, and AI products across multiple industries, in an agency setting with distributed teams and international clients. Owns the work from first discovery call through scoping, delivery, and follow on phases, with the last two years spent mostly on product decisions rather than execution alone. Runs client interviews and working sessions to find the real problem behind the request, then checks it against product data, funnels, retention, cohort behaviour, and usage patterns, so recommendations rest on evidence instead of opinion. Writes findings into short recommendation reports covering impact, effort, risk, and sequencing, and ties each one back to revenue, retention, adoption, or operating cost. Shapes how work is phased, packaged, and priced, presents directly to founders and senior stakeholders, and pushes back when a requested feature will not move the number they care about. Computer Science background with working knowledge of software delivery, UX process, analytics, and AI automation, so recommendations stay feasible and costed. Strong written and spoken English with a track record of direct communication with native English speaking clients.

SKILLS

Product: Discovery interviews and workshops, problem framing, opportunity assessment, roadmap phasing, prioritization, validation planning, business cases, prototyping

Analytics: Funnels, retention, cohorts, activation, KPI and SLA reporting, unit economics

Commercial: Pricing and packaging, proposals, scope expansion, change requests, project margin

Delivery: Agile and Scrum, scope and timeline ownership, cross functional and cross time zone teams, UX to development handoff, SOPs and team coaching

Tools: ClickUp, Jira, Asana, Trello, Notion, Figma and Figma Make, Lucidchart, GA4, Looker Studio, Retool, Excel and Sheets, Claude, n8n, GitHub, Postman, HTML, CSS, JavaScript

EXPERIENCE

Project Manager

Appalux Global IT

Apr 2025 - Present

Dhaka, Bangladesh

- Own client engagements end to end, from the first discovery call through scoping, delivery, and follow on phases, covering both direct clients and clients acquired through the company upwork agency profile.
- Conduct discovery interviews and working sessions with founders and client teams to map the business model, users, and workflows, and identify the underlying problem behind the stated request.
- Validate opportunities against product data before recommending scope, using funnel analysis to locate drop off points, retention and cohort views to assess whether new users stay, and usage patterns to distinguish requested features from actual user needs.
- Produce concise recommendation reports covering evidence, expected impact, effort, risk, and sequencing, giving clients a complete basis for the decision rather than a feature list.
- Connect each recommendation to a measurable business outcome across revenue, retention, adoption, or operating cost, and model the expected payback before budget is committed.
- Present recommendations directly to founders and senior stakeholders, and challenge assumptions where a requested feature does not serve the stated outcome, proposing lower cost alternatives that reach the same result.
- Shape phasing, packaging, and pricing for new and expanded scope, structuring cost against effort, risk, and client value, and defending that structure through client negotiation.
- Convert validated opportunities into scoped change requests and follow on phases, extending several engagements beyond their original contract value.
- Build working prototypes in Figma Make and Claude to test concepts within days, reducing the risk of committing budget to unvalidated ideas.
- Identify automation opportunities across client and internal workflows and implement them with n8n, eliminating repetitive manual work and improving project margin alongside tighter scope definition.
- Build reporting in Looker Studio, Retool, and GA4 to surface adoption, quality, and turnaround trends before they reach

the client.

- Coordinate cross functional teams across time zones supporting 70+ contributors, lifting operational accuracy from 82% to 97% through workflow redesign and closer execution tracking.
- Develop reusable discovery checklists, prioritization frameworks, and SOPs, and coach team members on applying them, reducing ramp up time and keeping output consistent across clients.

Associate Delivery Lead

Dec 2023 - Apr 2025

Quantigo AI

Dhaka, Bangladesh

- Managed delivery across multiple concurrent AI product engagements for global clients, aligning client expectations with what engineering, QA, and operations could realistically execute.
- Translated client requirements into scoped, prioritised work, and declined requests that added cost without contributing to the client outcome.
- Tracked KPIs, SLA adherence, quality scores, and throughput, and used the trends to recommend process changes ahead of a miss rather than after one.
- Diagnosed workflow bottlenecks, quantified the cost of each, and implemented the fixes with the strongest return.
- Maintained sprint documentation, delivery reports, and status communication so client and internal teams operated from a single view of progress.

Project Associate

Aug 2022 - Dec 2023

Quantanite

Dhaka, Bangladesh

- Supported delivery across multiple client projects covering workflow coordination, quality monitoring, and reporting, and tracked SLA compliance to protect timelines.
- Produced operational analysis that management used for staffing, workflow, and process decisions.

Data Operations Associate

Aug 2021 - Jan 2023

Bengali AI

Dhaka, Bangladesh

- Supported AI and ML data operations across computer vision and NLP projects, holding output to project guidelines and quality standards.
- Worked with cross functional teams on data validation and quality review, and resolved operational and data issues to keep accuracy consistent.

EDUCATION

B.Sc. in Computer Science and Engineering

2018 - 2022

Bangladesh University of Business and Technology

Dhaka, Bangladesh
